## Public Debt-to-GDP Ratio (2012-2023)

### Greece vs Euro Area

#### Greece:

**2012-2015:** Extremely high ratio (175-180%) amid debt crisis & bailouts.

**2016-2019:** Gradual stabilization; still >175%.

**2020 (COVID):** Peaked over 206% due to spending & GDP drop.

**2021-2023:** Declined to <170%, driven by GDP recovery & fiscal efforts.

#### Euro Area:

**2012-2019:** Stable at ~90-95%.

**2020:** Rose to ~100% with pandemic response.

**2021-2023:** Fell back to ~90% as economies recovered.

#### Insight:

Greece still leads in debt levels, but the post-COVID trend is improving, signaling enhanced fiscal stability.

## Economic Insights (2020-2024)

### Greece vs EU & Euro Area

#### COVID-19 Impact (2020):

- Severe GDP drop across all regions.
- Unemployment surged, especially in Greece due to dependence on tourism/services.

#### Recovery Phase (2021-2023):

- Greece:** Strong GDP per capita rebound; unemployment remained high.
- EU:** GDP recovered by 2022; unemployment stabilized below 7%.
- Euro Area:** Similar trend; unemployment dropped to ~6.5% by 2023.

#### Key Takeaway:

Greece recovered well in GDP per capita, but high unemployment persists, signaling deeper structural issues.
